## MODULE DESCRIPTION

Industrial design, outlook and common practice

### **Internship**

6 credits of a total of 30 credits

Course teacher: Cheryl Akner Koler

#### **General**

The student carries out their internship for a four-week period, in collaboration with professional designers in the design projects. They work independently in a professional context that apply design methods and skills.

#### **Learning Outcome**

After completion of the course, the student should demonstrate the ability to:

- collaborate with professional designers
- perform independent design work in a professional context
- reflect on the methods and contexts of professional designers, in relation to what the student has learned so far under their Industrial Design education
- demonstrate in a fundamental way the skills and knowledge required to work independently in working life

#### **Grades and qualifications**

The final rating is based on;

- completed internship
- presentation of his / her experience in the internship, including a reflection of professional methods and contexts, including in relation to what the student has learned so far.

The examiner is responsible for obtaining grade criteria for the examination and for their publication on the intranet.

#### **Grading scale Fail (U), Passed (G)**
